Interactive Prototype 1 Testing Results: XR Event Planning

Testing Session Summary

The XR Event Planning prototype was tested with five participants during the in-class testing session. Participants completed three main tasks:

- Furniture Arrangement
- Lighting Adjustment
- Theme Customisation

Participants were given goals rather than step-by-step instructions. During each task, I observed whether they could complete the interaction independently, whether assistance was required, and any moments of hesitation or confusion. Participants were also encouraged to think aloud and were asked short feedback questions after completing the prototype.

Task Completion Rating

The following rating system was used:

Pass (2): Completed independently

Assist (1): Completed after receiving a hint or assistance

Fail (0): Could not complete the task

Participant Results

Participant	Furniture Arrangement	Lighting Lever	Theme Wand and Pedestal	Key Observation
P1	Assist (1)	Pass (2)	Pass (2)	Needed help using the controller and grabbing furniture.
P2	Assist (1)	Pass (2)	Pass (2)	Moving furniture to the Delete Zone was difficult and tiring.

P3	Pass (2)	Pass (2)	Assist (1)	Needed help with the theme interaction and controller use.
P4	Pass (2)	Pass (2)	Pass (2)	Sometimes forgot how to access and operate the controller.
P5	Pass (2)	Pass (2)	Pass (2)	Sometimes forgot how to access and operate the controller.

All five participants were eventually able to complete the tested interactions, although some participants required assistance.

Independent Task Completion

Furniture Arrangement

3 out of 5 participants completed the task independently

60% independent completion

P1 and P2 required assistance.

Lighting Adjustment

5 out of 5 participants completed the task independently

100% independent completion

No participants required assistance.

Theme Customisation

4 out of 5 participants completed the task independently

80% independent completion

P3 required assistance.

Participant Notes

Participant 1

Task Performance

- Furniture Arrangement: **Assist (1)**
- Lighting Adjustment: **Pass (2)**
- Theme Customisation: **Pass (2)**

Observations

- Required assistance with using the simulated controller.
- Had difficulty grabbing and manipulating furniture.
- Larger furniture objects were more difficult to grab.
- Successfully understood the lighting interaction.
- Successfully understood how to use the theme interaction.

Feedback

- Found the controller difficult to use.
- Mentioned that controlling larger furniture could be improved.
- Responded positively to the theme interaction.
- Considered the theme interaction one of the more natural interactions in the prototype.

Participant 2

Task Performance

- Furniture Arrangement: **Assist (1)**
- Lighting Adjustment: **Pass (2)**
- Theme Customisation: **Pass (2)**

Observations

- Understood how to add furniture.
- Required assistance during the Furniture Arrangement task.
- Moving furniture across the venue to the Delete Zone was difficult and tiring.
- Successfully understood the lighting interaction.
- Successfully understood the theme interaction.

Feedback

- Found adding furniture natural.
- Found moving furniture to the Delete Zone slow and physically demanding.
- Suggested providing clearer guidance for the controls.
- Responded positively to the theme interaction.

Participant 3

Task Performance

- Furniture Arrangement: **Pass (2)**
- Lighting Adjustment: **Pass (2)**
- Theme Customisation: **Assist (1)**

Observations

- Completed the Furniture Arrangement task independently.
- Successfully adjusted the lighting.
- Required assistance to understand the theme interaction.
- Had difficulty understanding how to operate the simulated controller during parts of the session.

Feedback

- Found moving around the virtual environment natural.
- Found some of the simulated controller controls unclear.
- Found the theme interaction physically difficult to complete.
- Suggested that some interactions could also be supported by simpler controls such as buttons.

Participant 4

Task Performance

- Furniture Arrangement: **Pass (2)**
- Lighting Adjustment: **Pass (2)**
- Theme Customisation: **Pass (2)**

Observations

- Completed all three main tasks independently.
- Understood the furniture controls because the available controls were visible.
- Occasionally forgot how to access or operate the simulated controller.

Feedback

- Found adding furniture the most natural interaction.
- Suggested providing a quick-access guide for the simulator controls.

Participant 5

Task Performance

- Furniture Arrangement: **Pass (2)**
- Lighting Adjustment: **Pass (2)**
- Theme Customisation: **Pass (2)**

Observations

- Completed all three main tasks independently.
- Occasionally forgot how to access or operate the simulated controller.
- Successfully understood the physical lighting lever.

Feedback

- Found adding furniture and using the physical lighting lever natural.
- Suggested providing a quick-access guide for the simulator controls.

Post-Test Feedback Summary

Across the five participants:

- Adding furniture was frequently described as understandable or natural.
- The physical lighting lever was successfully used by every participant.
- Participants generally responded positively to the theme interaction.
- Difficulties with the XR Interaction Simulator appeared across multiple testing sessions.
- Furniture manipulation was more difficult for some participants, particularly when grabbing larger objects or moving furniture across the venue.
- Multiple participants suggested clearer guidance for operating the simulated controller.

Tutor Feedback

The tutor noted that travelling between the Lighting and Theme stations took too long because the interaction areas were positioned far apart within the large venue.

The tutor also highlighted that this could make testing less practical when using a physical VR headset in a limited classroom space.

The feedback suggested that the venue and furniture could remain at a realistic visual scale while reducing the amount of travel required between the main interaction areas.

Testing Data Summary

Interaction	**Independent Completion**	**Assist**	**Fai**

Furniture Arrangement	3/5 (60%)	2/5	0/5
Lighting Adjustment	5/5 (100%)	0/5	0/5
Theme Customisation	4/5 (80%)	1/5	0/5

No participants received a Fail rating for any of the three main tasks.
